

## Pendant mounted surface cylinders (Capri cylinders only)

In the past, Capri has offered pendant cylinders with custom lengths. For example, one used to be able to order a 17 ¼" stem, or a 12 ½" stem, or a 39 ½" stem, etc.....To help improve customer delivery dates and reduce their material cost in not having to incur expensive special set up fees, Capri now offers three standard lengths for the stems on the pendant cylinders.

The stem options available now are either 18", 48" or 96". Each of these stems can be cut in the field to accommodate the desired length. If a customer wishes to have a pendant that has a 73" stem, they can order the 96" and cut it down in the field. These stems are threaded only at one end, and therefore, do not require rethreading after field shortening. There is a small clamp that was designed to fit on the cut end of these stems that will keep the stem from slipping once the fixture is installed.

This standard option will allow your customer to optimize application requirements while not incurring long lead times for product specials. Should special stem lengths still be required beyond standard offering, please contact product management for review and acceptance.

Following is a list of the Capri cylinders that are pendants which include a stem and may be field shortened to meet specific application requirements.
